

Wireless – to start with.

Everything you really need to perform pretty much anywhere you want. Easy to use wireless technology. Utterly reliable transmission. Quality at a price you don't even have to think about.

Sennheiser's **freePORT** offers a robust wireless system which is technically state-of-the-art and totally uncomplicated.

You don't need to be a wireless-expert to set it up and use it: just pop in the batteries, connect the receiver and switch it on! That's all there is to it.

Each of the four UHF channels transmitting sound to the receiver can be switched on at the turn of a knob. There's never any risk of frequency jamming. That means you can easily use four **freePORT** systems at the same time! **freePORT** is perfect for singers, bands, and presenters who count on the reliability and quality of Sennheiser's UHF transmission technology. Dynamic processors provide a clear and natural sound.

That's how **freePORT** prepares you for the biggest stages in the world. With a technology which is already accepted as standard there.

And by the way – **freePORT** is licence-free in many countries!
